

The Commers B Series

- Patented "Inch Worm" technology eliminates noisy air discharge
- Chemical free backwashing
- Easily programmed for optimum performance
- Advanced history and diagnostic screens
- Extended lithium battery backup
- Extremely low cost operation
- Environmentally safe
- Effective at removing low to high levels of Ferric (red water iron) and Ferrous (clear water iron) metals

B Series - Chemical Free Iron Filtration

Why Choose the B Series

The Commers B Series Iron Filtration System is a chemical free alternative to traditional iron filters. Designed to work in conjunction with a Commers IM or Evolve Series Softener, the B Series is the first line of treatment for iron bearing private wells. The chemicals used in traditional iron filters require careful handling and can become a health hazard if used improperly. Our system features a highly customizable metered valve head. This valve head controls a filtration system that uses air to oxidize dissolved iron and effectively trap and filter the highest levels of iron without using expensive chemicals. The B Series is a critical piece of a properly designed Commers system that will provide clear, clean, soft and iron free water throughout your home and make iron staining a thing of the past.

Your Minnesota Water Treatment Experts

Commers Water Company offers a full range of water treatment including water purification and filtration. Commers has been working with purification and drinking water concerns for nearly 40 years, long before drinking water was a national concern. Commers invented its first drinking water system in 1978 and was the first to bring these types of systems to Minnesota. In a continuing effort to pioneer the drinking water field, Commers began to work with a new technology called reverse osmosis in 1980. Working closely with the inventor of residential reverse osmosis drinking systems for nearly 40 years, Commers Water has more experience with drinking water systems and water purification than any other dealer in the State of Minnesota.
