## What size salt tank is right for me?

The salt tank is to a softener, similar to that the gas tank is to a car, without salt, your softener will not function. The salt is melted into a brine solution and in this state it is flushed through the media bed to regenerate the water softener resin. Commers offers four sizes of brine tanks to accommodate various needs and space availability. Let a Commers water treatment specialist help in determining the right brine tank to best suit your needs.

### Brine tank sizes:

- 11" x 11" x 33" - Ideal for any "tight squeeze" situation. (120 lbs. capacity)
- 14" x 14" x 33" - A space saver with greater salt storage. (200 lbs. capacity)
- 18" dia x 33" - The standard if space permits. (250 lbs. capacity)
- 18" dia x 40" - Used for our large capacity units. (300 lbs. capacity)
