

The Commers IM Series

- High efficiency regeneration saves on salt & water usage
- Removes high levels of hardness
- Provides maximum iron removal to effectively manage challenging private well issues
- 21 day variable reserve accurately tracks & predicts daily water use
- Counter current regeneration improves system performance and efficiency
- Soft water brining protects the valve from rigors of private wells adding years of life
- High performance 1" control valve & distributor ensure maximum water flow
- Super capacitor and lithium battery backup protect system settings from power failure
- 9 programmable cycles provide flexibility to treat a range of well specific problems
- Diagnostic capabilities second to none
- Lifetime warranty on both tanks, 5 year warranty on the valve and all parts

IM Series - Well Water Softener and Iron Filter

Additional Information

Unlike conventional downflow water conditioners, the IM series uses counter current regeneration to ensure maximum efficiency, consistent water quality and effective removal of iron and other trapped particles from the ion-exchange resin bed. In addition, the IM series uses soft water brining to protect the inner workings of the valve head from the wear and tear of iron bearing private wells, adding years of service life to your new softener. You'll enjoy the benefits of soft and iron free water for many years to come!

- Additional filtration components tackle the most difficult water problems
- Remove high levels of iron with no chemical upkeep
- Hydrogen sulfide removal to control nasty, "rotten egg" odors

Your Minnesota Water Treatment Experts

Commers Water Company offers a full range of water treatment including water purification and filtration. Commers has been working with purification and drinking water concerns for nearly 40 years, long before drinking water was a national concern. Commers invented its first drinking water system in 1978 and was the first to bring these types of systems to Minnesota. In a continuing effort to pioneer the drinking water field, Commers began to work with a new technology called reverse osmosis in 1980. Working closely with the inventor of residential reverse osmosis drinking systems for nearly 40 years, Commers Water has more experience with drinking water systems and water purification than any other dealer in the State of Minnesota.

Commers The Water Company From Our Family To Yours!
