

B Series - Chemical-Free Iron Filtration System

The Commers B Series Iron Filtration System is a chemical free alternative to traditional iron filters. Designed to work in conjunction with a Commers IM or Evolve Series Softener, the B Series is the first line of treatment for iron bearing private wells. The chemicals used in traditional iron filters require careful handling and can become a health hazard if used improperly. Our system features a highly customizable metered valve head. This valve head controls a filtration system that uses air to oxidize dissolved iron and effectively trap and filter the highest levels of iron without using expensive chemicals. The B Series is a critical piece of a properly designed Commers system that will provide clear, clean, soft and iron free water throughout your home and make iron staining a thing of the past.

Features of the B Series

- Patented "Inch Worm" technology eliminates noisy air discharge
- Chemical free backwashing
- Easily programmed for optimum performance
- Advanced history and diagnostic screens
- Extended lithium battery backup
- Extremely low cost operation
- Environmentally safe
- Effective at removing low to high levels of Ferric (red water iron) and Ferrous (clear water iron) metals

The B Series is Equipped with the Latest Technology

Features of the wripli® Mobile App

Using a dedicated WiFi network, wripli® enabled units are capable of wirelessly transferring information and notifications to the palm of your hand. This technology pairs the on-demand habits of today's buyers to the advanced features of our water softeners to create one powerful digital resource.

Salt Reminders

wripli® will tell you when your system is low or out of salt.

Service Alarm

Know when it is time to perform scheduled maintenance.

System Errors

Receive an alert if your system ever encounters an error.

Your Minnesota Water Treatment Experts

Commers Water Company offers a full range of water treatment including water purification and filtration. Commers has been working with purification and drinking water concerns for over twenty years, long before drinking water was a national concern. Commers invented its first drinking water system in 1978 and was the first to bring these types of systems to Minnesota. In a continuing effort to pioneer the drinking water field, Commers began to work with a new technology called reverse osmosis in 1980. Working closely with the inventor of residential reverse osmosis drinking systems for over twenty years, Commers Water has more experience with drinking water systems and water purification than any other dealer in the State of Minnesota.

From Our Family To Yours!
