

Twin Demand Water Softener

The Commers Twin Demand System will provide 24/7 soft water. When tank A uses 100% of its softening ability, the system automatically switches to tank B giving you uninterrupted soft water. This unit is great for large families or light commercial use.

- Maximizes efficiency by using 100% of each tanks ability to soften your water before switching to the auxiliary tank
- Ideal for large families with high water use
- Uses salt based only on your exact water usage
- Can be customized and sized to fit your family's needs
- Soft water brining and regeneration adds years of maintenance free service
- High performance 1 inch control valve and distributor ensure maximum water flow throughout your home
- Twin tank design allows for 24 hour soft water service even during the regeneration cycle
- Lifetime warranty on all three tanks, 7 year warranty on the valve and all other parts

Provides Continuous, Efficient, Unlimited Water Conditioning

The Commers Twin Demand System will provide 24/7 soft water. When tank A uses 100% of it's softening ability, the system automatically switches to tank B giving you uninterrupted soft water. This unit is great for large families or light commercial use.

What size salt tank is right for me?

The salt tank is to a softener, similar to that the gas tank is to a car, without salt, your softener will not function. The salt is melted into a brine solution and in this state it is flushed through the media bed to regenerate the water softener resin. Commers offers four sizes of brine tanks to accommodate various needs and space availability. Let a Commers water treatment specialist help in determining the right brine tank to best suit your needs.

Brine tank sizes:

- 15" x 17" x 33" - A space saver with greater salt storage. (200 lbs. capacity)
- 18" dia x 33" - The standard if space permits. (250 lbs. capacity)
- 18" dia x 40" - Used for our large capacity units. (300 lbs. capacity)

Your Minnesota Water Treatment Experts

Commers Water Company offers a full range of water treatment including water purification and filtration. Commers has been working with purification and drinking water concerns for over forty years, long before drinking water was a national concern. Commers invented its first drinking water system in 1978 and was the first to bring these types of systems to Minnesota. In a continuing effort to pioneer the drinking water field, Commers began to work with a new technology called reverse osmosis in 1980. Working closely with the inventor of residential reverse osmosis drinking systems for over twenty years, Commers Water has more experience with drinking water systems and water purification than any other dealer in the State of Minnesota.
